

VIRTUALIT

Pellipar Success Story:

Seamlessly Transitioning from a Listed Building to Virtual IT's Security First, Cloud Platform

We are pleased to present a new case study with Pellipar, who approached us to undertake a multi-faceted cloud-migration project which culminated in a new flexible cloud infrastructure, telephony solution, and the implementation of Virtual IT's robust Cyber Security First managed services across its IT environment.

The Client

Pellipar are members of the great twelve livery companies in London, with their origins lying within the Skinners Company in particular. Pellipar have been partnered with Virtual IT since 2016.

Relocation and Transformation

Pellipar have traditionally been based in Skinner's Hall in London, a listed building that is now undergoing a three year long refurbishment. As Pellipar was required to move out of Skinner's Hall for this time, they contacted Virtual IT to help them to migrate their IT environment to the Cloud.

This big project involved three key pieces: migrating their applications and servers to the cloud, implementing additional cyber security protection for this new setup, and creating a new telephony solution, as the old telephony setup that was hosted by Skinner's Hall would no longer be accessible.

Virtual IT drafted a smooth migration project that would empower Pellipar to continue operating productively and securely, beginning with migrating Pellipar's on-site server and its applications onto Microsoft Azure. As the company moved to a new office, a new telephony solution was implemented in the meantime. In order to ensure the continued integrity of Pellipar's systems throughout the migration and beyond, we implemented our Cyber Security First managed services approach to mitigate their cyber risks

The Benefits

Pellipar were able to continue operating seamlessly with reliable and flexible cloud infrastructure. When they return to Skinner's Hall, they will be able to continue using the cloud, giving them future flexibility while lowering their hardware maintenance costs. With their new telephony solution, they can continue seamlessly conducting calls in the meantime, while also enjoying the robust set of protections that our extra Cyber Security First managed services approach offers. They have also been able to streamline their services into one package with us, making it easier to scale and adapt them as they need.

Virtual IT excels at these types of projects, bringing with it decades of very relevant cloud migration experience. We are passionate about our clients' successes and take the time to ensure that our clients are sufficiently well informed of their options, so that they can make the right choices for their organisation, whatever their requirements. This is an example of a long standing relationship, and we look forward to continuing that journey in the coming years.
